CROATIAN HPC DAYS 2026 · SRCE ZAGREB · TUESDAY 24 NOVEMBER

Get ready in 45 minutes.

On the day we build, we don't install. Do these four steps at home, before Monday 23 November.

What you need

☐ Your own laptop and its charger. If it is a work laptop and it blocks installing, don't work around your IT rules: bring a private laptop or tell us before the day.

☐ A paid plan on your own account: **Claude Pro** or **ChatGPT Plus**, each about USD 20 a month, cancel any time. Free accounts are not enough.

☐ A free GitHub account (step 2) and about 45 minutes.

1 Install one tool and log in 15 min

Pick one; both work for the whole day. Already pay for one? Take that one. Never used a terminal? Take the app.

Claude Code by Anthropic · needs Claude Pro

App (easiest)

Install the Claude desktop app from claude.com/download, log in, open the **Code** tab.

Or terminal · macOS, Linux

```
curl -fsSL https://claude.ai/install.sh | bash
```

Or terminal · Windows PowerShell

```
irm https://claude.ai/install.ps1 | iex
```

Open a new terminal, type `claude`, log in in the browser.

Codex by OpenAI · needs ChatGPT Plus

App (easiest)

Install the ChatGPT desktop app from chatgpt.com/download, log in, choose **Codex**.

Or terminal · macOS, Linux

```
curl -fsSL https://chatgpt.com/codex/install.sh | sh
```

Or terminal · Windows PowerShell

```
powershell -ExecutionPolicy ByPass -c "irm https://chatgpt.com/codex/install.ps1 | iex"
```

Open a new terminal, type `codex`, choose “Sign in with ChatGPT”.

No admin rights needed. A free Claude account does not include Claude Code. ChatGPT Free has Codex only in the desktop app, with tight limits: not enough for a day. Other tools are welcome, but on the day we can only help with these two.

2 Git and GitHub 15 min

During the day you save versions of your work in GitHub Desktop (commit and push). They go into your own private repository on GitHub. The agent tells you when.

1. **Create a free GitHub account** at github.com/signup. Free accounts have unlimited private repositories.
2. **Install GitHub Desktop** from desktop.github.com (Mac and Windows) and sign in to GitHub.com. When it asks to configure Git, keep the suggested name and e-mail. This is the name on your saved versions.
3. **Check Git.** Mac: in Terminal type `git --version`. If Git is missing, macOS offers to install the command line developer tools: click **Install**. Windows: install Git from git-scm.com (all defaults). Linux: use your package manager. GitHub Desktop is not available on Linux.

Please do all four steps at home. 48 people downloading on one Wi-Fi is slow.

3 Your own private copy 10 min

1. **Open the starter** github.com/AIAT-AIandBusinessgrowth/build-sessions-starter, signed in to GitHub. Click **Use this template → Create a new repository**.
2. **Choose a name**, for example `my-agent-day`. Select **Private**, click **Create repository**. Do not make a fork: forks of public repositories stay public.
3. **On your new repository** click **Code → Open with GitHub Desktop → Clone**. Note the folder ("Local path"). Linux: `git clone` in the terminal (sign in first with `gh auth login`); save with `git commit` and `git push`.

No GitHub? On the starter page click **Code → Download ZIP** and unzip it (Mac: double-click; Windows: right-click → *Extract All*). Everything else works the same, only nothing is saved to GitHub.

4 The test: type `start` 5 min

1. **Open your copy in your tool.** App: open the folder from step 3. Terminal: go into it, type `claude` or `codex`.
2. **Type `start`** and press Enter. Asked to read or write files? "Yes" is fine here.
3. **The agent asks its first question**, marked "Question 1 of 3", with numbered example answers.

"Question 1 of 3"? Stop, you are ready. On the day, open the same folder and carry on.

If something doesn't work

If you see …	… do this
"command not found" right after installing	Close the terminal, open a new one. Still missing? Take the app.
The login page doesn't open	Copy the link from the terminal into the browser (Claude Code: `c`).
Codex says it can't create files	Type `/permissions`, choose **1. Ask for approval**. Never Full Access.
No Use this template button	Sign in to GitHub first.
You type `start`, but no "Question 1 of 3"	You opened the wrong folder. Open the folder with `README.md` and `AGENTS.md`, not one inside or around it.

Rule one: only made-up data

No real names, customers, files from work, passwords or keys, not even in the test, and not in your private repository. Personal AI subscriptions have no data processing agreement with your organisation, so the agent invents the sample data for you.

Prefer Croatian? Use the Croatian starter in step 3 and the Croatian version of this guide.
Still stuck? Just reply to your registration e-mail. See you on Tuesday 24 November, 09:00 at SRCE (room open from 08:30).

Checked on 2 November 2026 with Claude Code 2.1.316 and Codex 0.166.0, against code.claude.com/docs, claude.com/pricing and learn.chatgpt.com/docs. If the vendor page says something else, the page wins.
